

隨 12  $q=20$ ,  $AC$  與  $AVC$  差 10,  $q=40$  差?

$$q=20 \quad AC = AFC + AVC, \quad AFC = 10$$

$$AFC = \frac{FC}{q} = \frac{rK}{q}, \quad FC = 200$$

$$q=40, \quad AFC' = 5 \#$$

隨 13  $MC = 10q$ ,  $FC = 100$ ,  $q = 10$ ,  $TC$ ?

$$TC = FC + VC = 100 + VC$$

$$MC = \frac{dVC}{dq} = 10q$$

$$VC = \int MC dq = \int_0^{10} 10q dq = 5q^2 \Big|_0^{10} = 500$$

$$TC = 100 + 500 = 600 \#$$
